

OpenTelemetry 101

The background of the slide is a photograph of a night sky. The Milky Way galaxy is visible as a bright, hazy band of light stretching across the center of the frame. Numerous stars are scattered throughout the dark sky. In the lower right foreground, a black telescope is mounted on a yellow and black tripod, pointing towards the upper left. The overall scene is dark and atmospheric.

@horovits

- Principal Developer Advocate at  logz.io
- 20 years in the hi-tech industry
- Developer, architect, product
- CNCF advocate, meetup organizer
- OpenObservability Talks podcast

**OPEN
OBSERVABILITY
TALKS**

The vision: unified observability

The reality: fragmented instrumentation

OpenTelemetry (a.k.a. OTel)

“OpenTelemetry is an observability framework – software and tools that assist in **generating and capturing telemetry data** from cloud-native software.”

Across Traces, Metrics, Logs

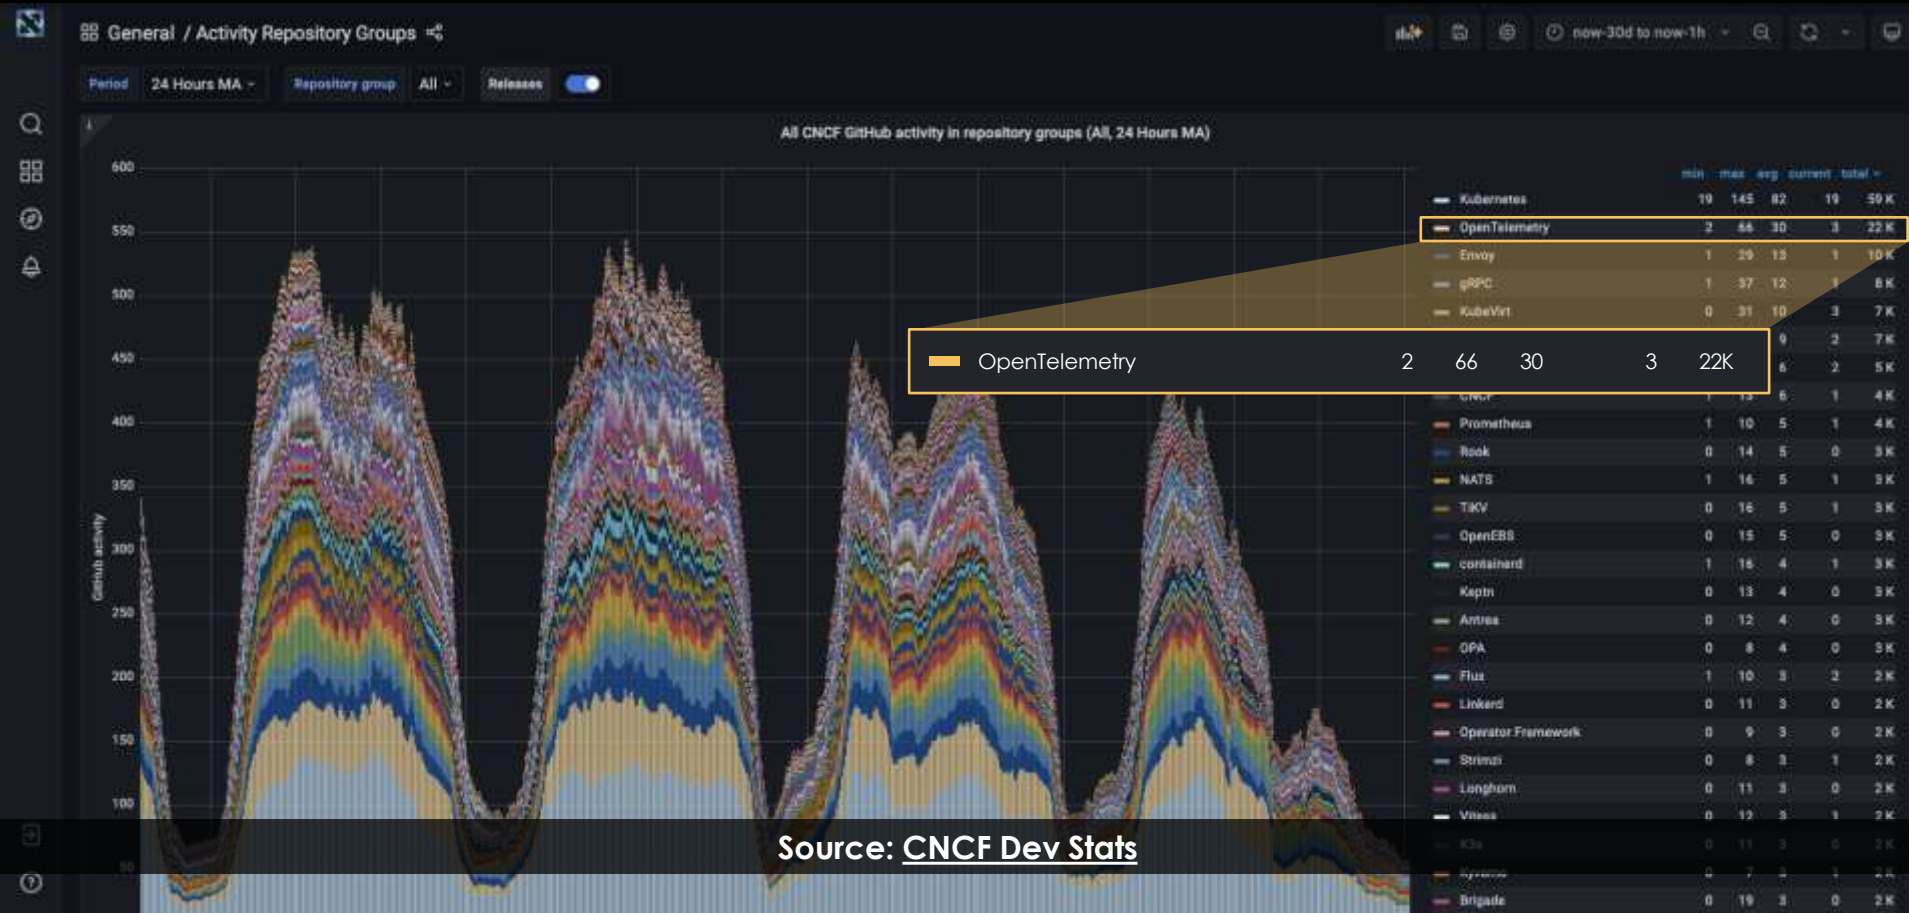

Second most active CNCF project

OpenTelemetry

A unified set of vendor-agnostic APIs, SDKs and tools for generating and collecting telemetry data, and then exporting it to a variety of analysis tools.

OpenTelemetry Specification

**Cross-language requirements for all
OpenTelemetry implementations**

API specification | SDK specification | Data specification

For traces, metrics and logs

OpenTelemetry Client Libraries

.NET

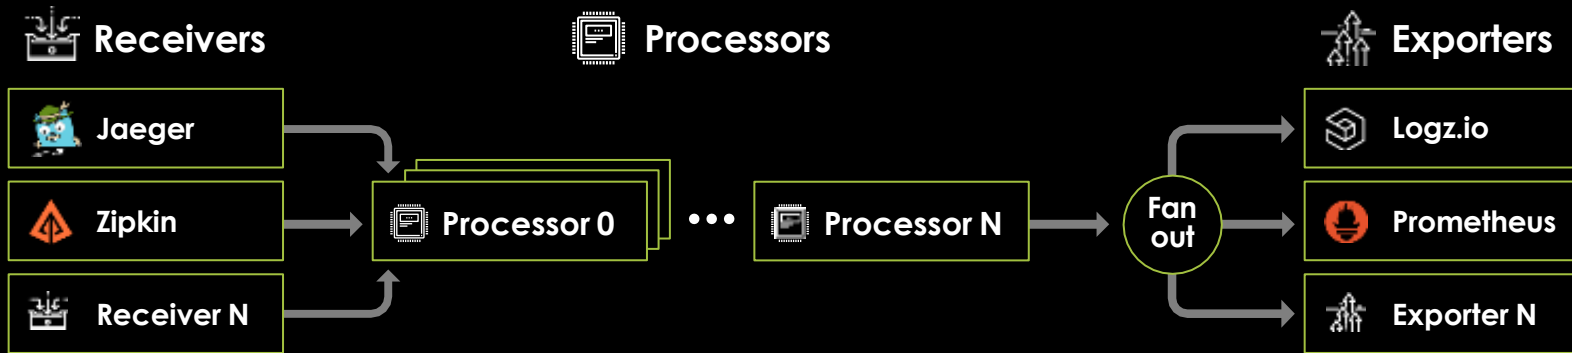

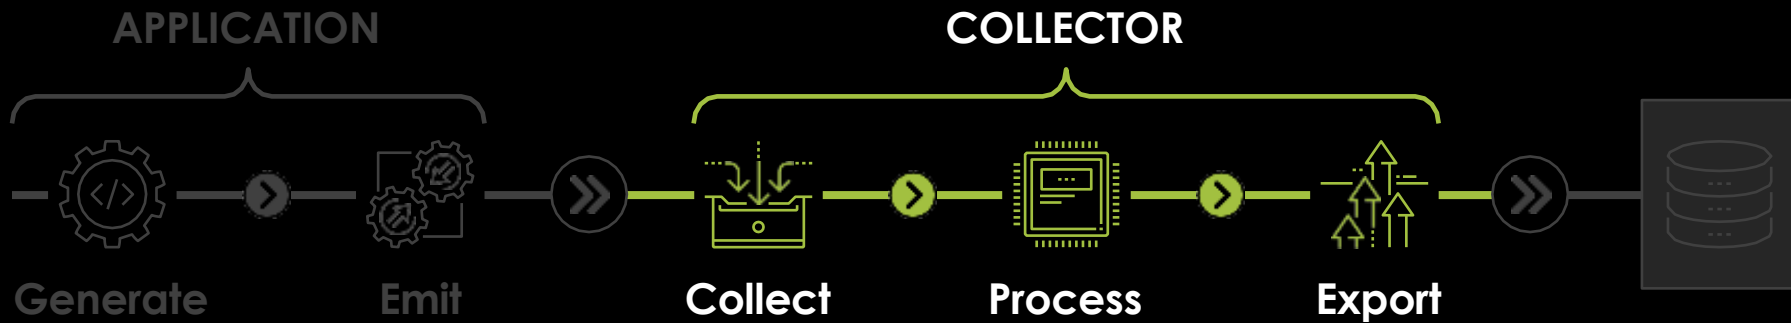

GO

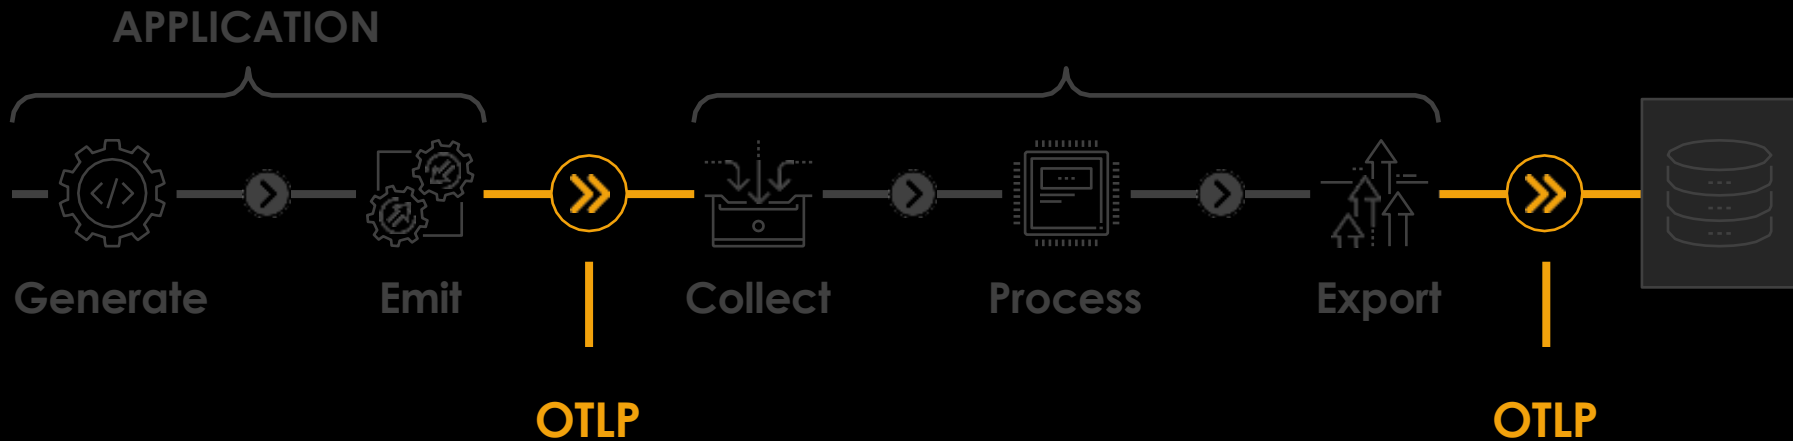

php

OpenTelemetry Collector

OpenTelemetry Protocol (OTLP)

Transport: grpc and HTTP 1.1 | Encoding: protobuf | Telemetry data model

Is OpenTelemetry GA?

☒ YES

☐ NO

☒ IT DEPENDS ✓

Status for...

	Metrics	Tracing	Logging	
Collector		C++	.Net	API
Receivers				Protocol
		GoLang		Java
Exporters			SDK	

State of the signals

State of the signals

Generally Available

- API, SDK, Protocol are stable
- Client libraries >v1.0 for Java, Go, .Net, Python, C++, JavaScript, Ruby, Erlang, Swift
- Working on PHP, Rust and more
- Long-term support, backwards compatibility, and dependency isolation

Release Candidate

- RC announced May '22
- API, SDK, Protocol are stable
- Client libraries in Java, .NET, Python, JavaScript in RC
- Working on and more languages
- Prometheus support

Experimental

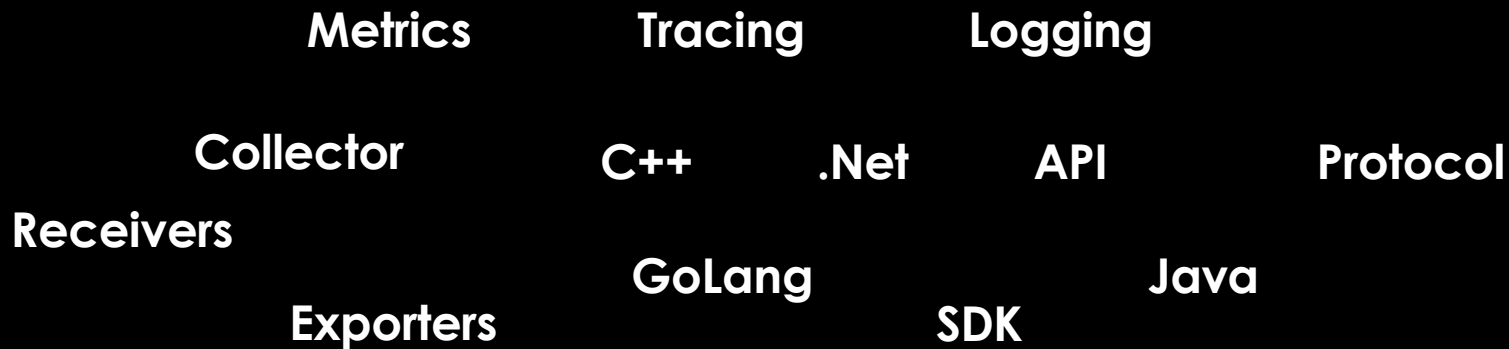

- Protocol is Stable
- API, SDK are experimental
- Focusing first on integration with existing logging systems
- Log appenders are under development in many languages
- ECS support kicked off

More OpenTelemetry Updates

- Adding Continuous Profiling
- Adding Real User Monitoring support (client-side tele.)
- eBPF for auto-instrumentation
- Ease of Operation with Remote Agent Management
- OpenTelemetry demo reached GA
- Port 4317 is registered @IANA for OpenTelemetry

OpenTelemetry Roadmap and Latest Updates blog:
<https://www.cncf.io/blog/2022/07/07/opentelemetry-roadmap-and-latest-updates/>

How do I get started with OpenTelemetry?

Know your stack

**Which
languages?**

**Which
signals?**

**Which
protocols?**

**Which
analytics tools?**

Then check status for each and follow respective guides

<https://opentelemetry.io/status/>

Know your stack
